

Ramping up the safety factor: HELLA showcases new lighting solutions at the RETTmobil

- **New warning light, the BST "Slim", provides more fields of application and a greater warning effect**
- **VISIOTECH projection technology enables danger zones to be optically spotlighted**
- **LED handheld searchlight Module 70 Generation 3 makes targeted lighting possible**

Lippstadt, May 16, 2018. From May 16 - 18, 2018 the lighting and electronics expert HELLA is showcasing its specialized portfolio for police, fire-fighting and rescue services at the RETTmobil in Fulda, Germany (Tent F, Booth 1218). The RETTmobil is the leading international exhibition for rescue and mobility. The portfolio on display will include work lights, beacons, roof light bars, auxiliary lighting systems and the RTK all-round beacons with sound combination.

With emergency vehicles it is especially important not only "to see" but also "to be seen". So it comes as no surprise that, when it is a question of warning lights, the "Slim" variant of the well-known "BST" series will be taking center stage on the HELLA exhibition stand. The new warning light is only 12.8 mm high and stands out because of its strikingly slim design. The result is that it blends in excellently with each kind of vehicle shape. Manufacturers are able to choose between variants with three or six LEDs and there is also a selection of light colors, flashing patterns and mounting options. Furthermore, special versions equipped with daytime/nighttime mode allow illumination to be individually adjusted.

Danger zones should always be identified in a clearly visible way so that all traffic is aware of any operations being carried out. The new VISIOTECH projection technology from HELLA enables such areas to be marked out on the ground by means of individual shapes and symbols. This technology is integrated in the so-called VISIOTECH projection module. Visitors to the fair will be able to gain an impression of all the diverse functions there and then on the spot.

PRESS RELEASE

Another highlight to be showcased by HELLA is the "Handheld Searchlight Module 70 Generation 3" which makes targeted lighting possible during all manner of operations. This light is equipped with four high-power LEDs whose 6500° Kelvin color temperature is very similar to daylight, thus creating good visibility.

You, too, can experience the products of HELLA at the RETTmobil exhibition in Tent F, Booth 1218.
